The Malaysian Standards MS2530 series (Malaysian Sustainable Palm Oil - MSPO) provide general principles for the implementation, establishment and improvement of the operational practices of sustainability to ensure sustainable production of palm oil.

This standard covers the areas of operations of the oil palm industry along the whole supply chain comprising independent and organized smallholders, plantations and palm oil mills. It also includes grouping smallholders such as Sustainable Palm Oil Cluster (SPOC) and other group management systems. This certification procedure needs to be adhered to in order to be sustainably certified.

The scheme owner of MSPO is the Malaysian Palm Oil Certification Council (MPOCC) and only accredited certification bodies such as DQS who are registered and approved by MPOCC are allowed to offer MSPO certification. Accredited MSPO certificates will be issued after the audit has been successfully conducted as per the scheme and accreditation requirements.
MSPO is now announced mandatory for smallholders, oil palm plantations & palm oil mills to be MSPO certified by 31st December 2019*

Benefits:
- Transparency & credibility are assured
- Complies to legal requirements
- High degree of environmental protection
- Improved image & competitive ability
- Implementing Good Agricultural Practices (GAP)
- Secure market share in legally regulated area

Your way towards MSPO certification

Application
Stage I Audit
Stage II Audit
Peer Review
Approved Report
